

The Chlorine Calculator will work for chlorination of a private well or bulk water hauler tank. There are actually 2 spreadsheets in this file. One is the calculator for multiple ppm for bleach solutions of 5.25% and 6-6.25%, and the other is just a quick reference guide for volume measurements and a reference chart for ppm calculations.

The calculator allows you to insert any volume of water in gallons, and it will automatically calculate how much bleach needs to be added for the desired ppm (800, 400, 200, 100, 50, and 25 ppm).
